01 PROFILE

A specialist product designer with more than 25 years as a fully qualified electrical engineer, I design, build and commission renewable and off-grid power in the world's harshest, highest-hazard environments. For the past ten years I have led the design, construction and commissioning of the internationally renowned Sunstone equipment range, **setting the standard for remote autonomous power platforms.**

Safety and efficiency underpin all of my design work, with a focus on operation and maintenance and on optimising multiple technologies into truly hybrid systems. I am now looking for a senior or managerial engineering role, UK-based or international, with an organisation that values an innovative, collaborative professional who leads from the front.

02 SELECTED PROJECTS

TENGIZCHEVROIL (TCO) · CHEVRON · WITH FLUOR

Sunstone SICS — Solar Off-Grid Security Systems

Designed and delivered 58 solar off-grid security systems on time and on budget, from concept to completion, for one of the world's harshest environments. Commissioned on site with operations and maintenance training for Kazakh and Russian engineers in the Tengiz oil field, Kazakhstan. The equipment has since far exceeded its design life.

SYSTEMS DELIVERED

£2.5M+

CONTRACT VALUE

TELENT · NETWORK RAIL · SCOTRAIL

Altnabreac Off-Grid Power Station

Lead engineer on a fully bespoke hybrid power station running Telent's Request to Stop kiosk in one of the remotest parts of Scotland, saving more than £500,000 against a conventional supply. Taken through Network Rail's GRIP process to commissioning and FAT, and Eurofins-certified for EMC and RF within the rail 3m zone.

9kW PV · 12kW Bladon Microturbine · 48kWh Battery · Victron Control

UPTIME, 2+ YRS OFF-GRID

RAFT — Next-Generation Power Platforms

Building on SICS, engineered a new generation of 33 off-grid power platforms with greater power and battery capacity, delivered over two years and proven in temperatures from -40°C to over 50°C. Now providing ongoing remote operations and maintenance support for the RAFT systems and legacy kit.

PLATFORMS ENGINEERED

£1M+

CONTRACT VALUE

ARC Series — Autonomous Power Platforms

Ten years personally responsible for the design, construction and commissioning of the ARC series, now the UK market leader for off-grid solar CCTV, surveillance and communications. More than 300 systems in use with a further 100 in commissioning. The HVO-optimised engine has lifted reliability, efficiency and safety; certified compliant with Element Material Technologies.

03 CORE SKILLS

DESIGN & DELIVERY

Requirements gathering & validation · outline and detailed design · prototyping and testing · stakeholder management.

LEADERSHIP & COMPLIANCE

Safety management · inter-disciplinary team co-ordination · safety & product compliance · operation and maintenance optimisation.

POWER & HYBRID SYSTEMS

PV system design, integration, installation, commissioning & maintenance · off-grid battery & hybrid systems · micro-turbine, fuel cell & heat pump integration · structural analysis.

SELECTED FEEDBACK

“Unflappable” · “Talented critical thinker”
· “100% consistent” · “Designs that speak for themselves”

04 ACCREDITATIONS

- City & Guilds 2391-52 — Inspection & Testing
- BS 7671 Condition Inspection & Reporting (EICR)
- NICEIC Solar Photovoltaic Design & Installation
- MIET — Member of the IET
- CITB SMSTS — Site Managers' Safety
- Basic Track Awareness (TfL)
- 18th Edition BS 7671 — British Wiring Standards
- NEBOSH H&S Management for Construction
- ECS Site Manager status
- City & Guilds HV Awareness
- Personal Track Safety (Network Rail)
- Mitsubishi Heat Pump Design & Installation
